

SVEUČILIŠTE U ZAGREBU FAKULTET ŠUMARSTVA I DRVNE TEHNOLOGIJE
UNIVERSITY OF ZAGREB FACULTY OF FORESTRY AND WOOD TECHNOLOGY

Hymenoscyphus fraxineus in glivni kompleks povezan z odmiranjem ozkolistnega jesena na Hrvaškem

Danko DIMINIĆ, Jelena KRANJEC ORLOVIĆ

Institute of Forest Protection and Wildlife Management / Zavod za zaštitu šuma i lovno gospodarjenje

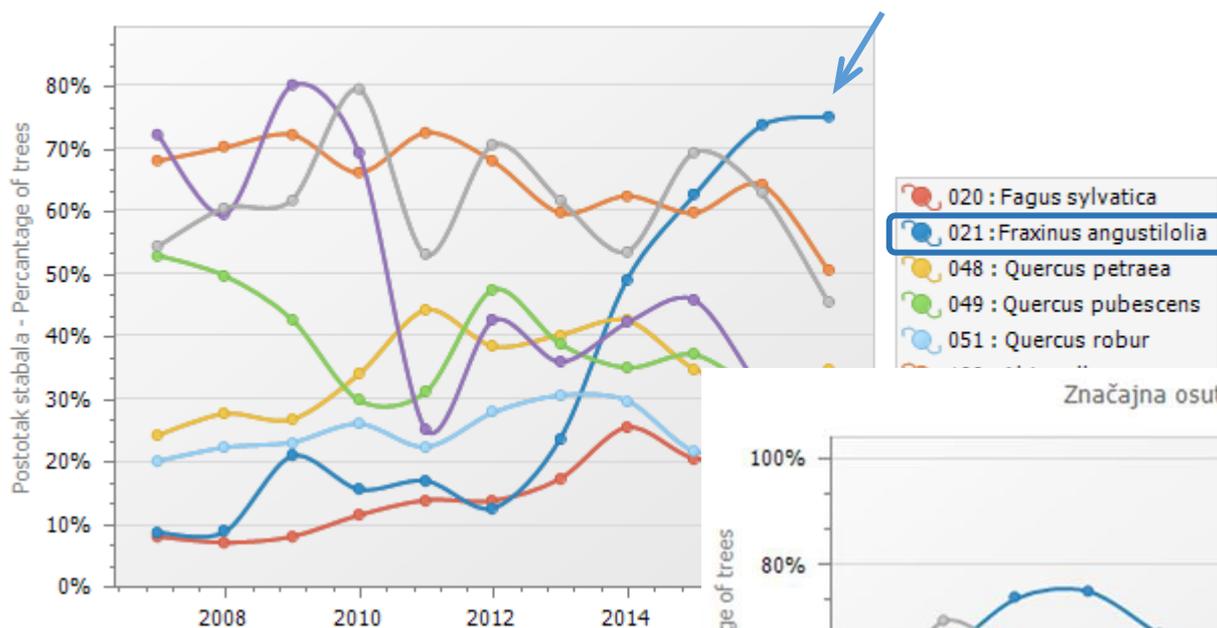

15. seminar in delavnica iz varstva gozdov, Črna na Koroškem, 07.05.2025

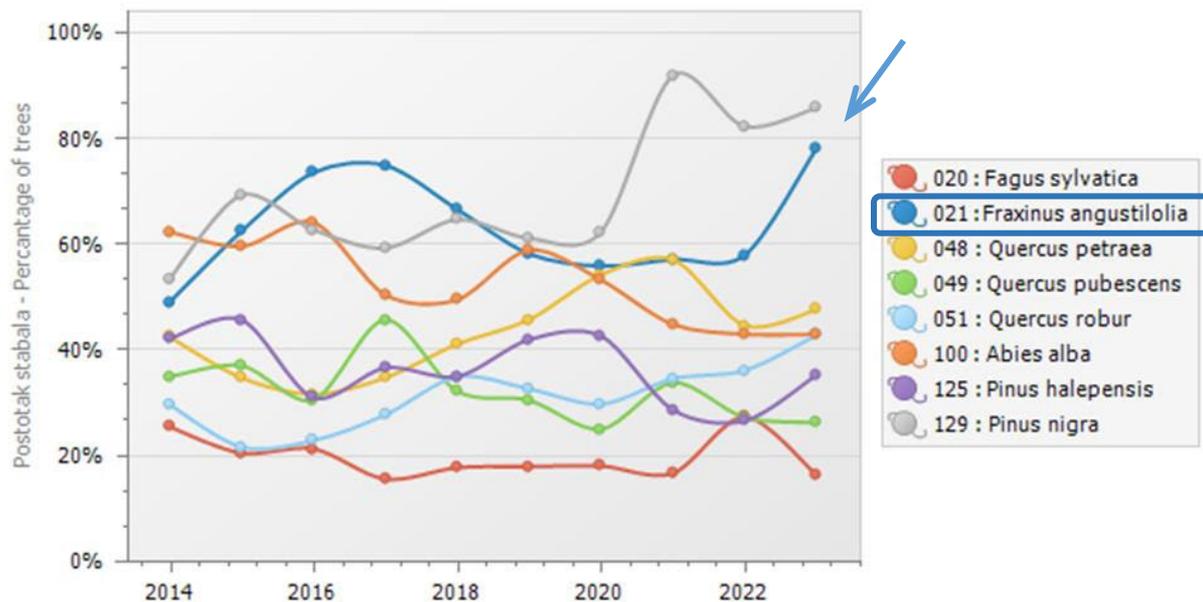

Pomembna osutost krošenj gozdnega drevja na Hrvaškem v obdobju 2007-2021

Significant crown defoliation of forest trees in Croatia in the period 2007-2021

Značajna osutost glavnih vrsta drveća u RH

Značajna osutost glavnih vrsta drveća u RH

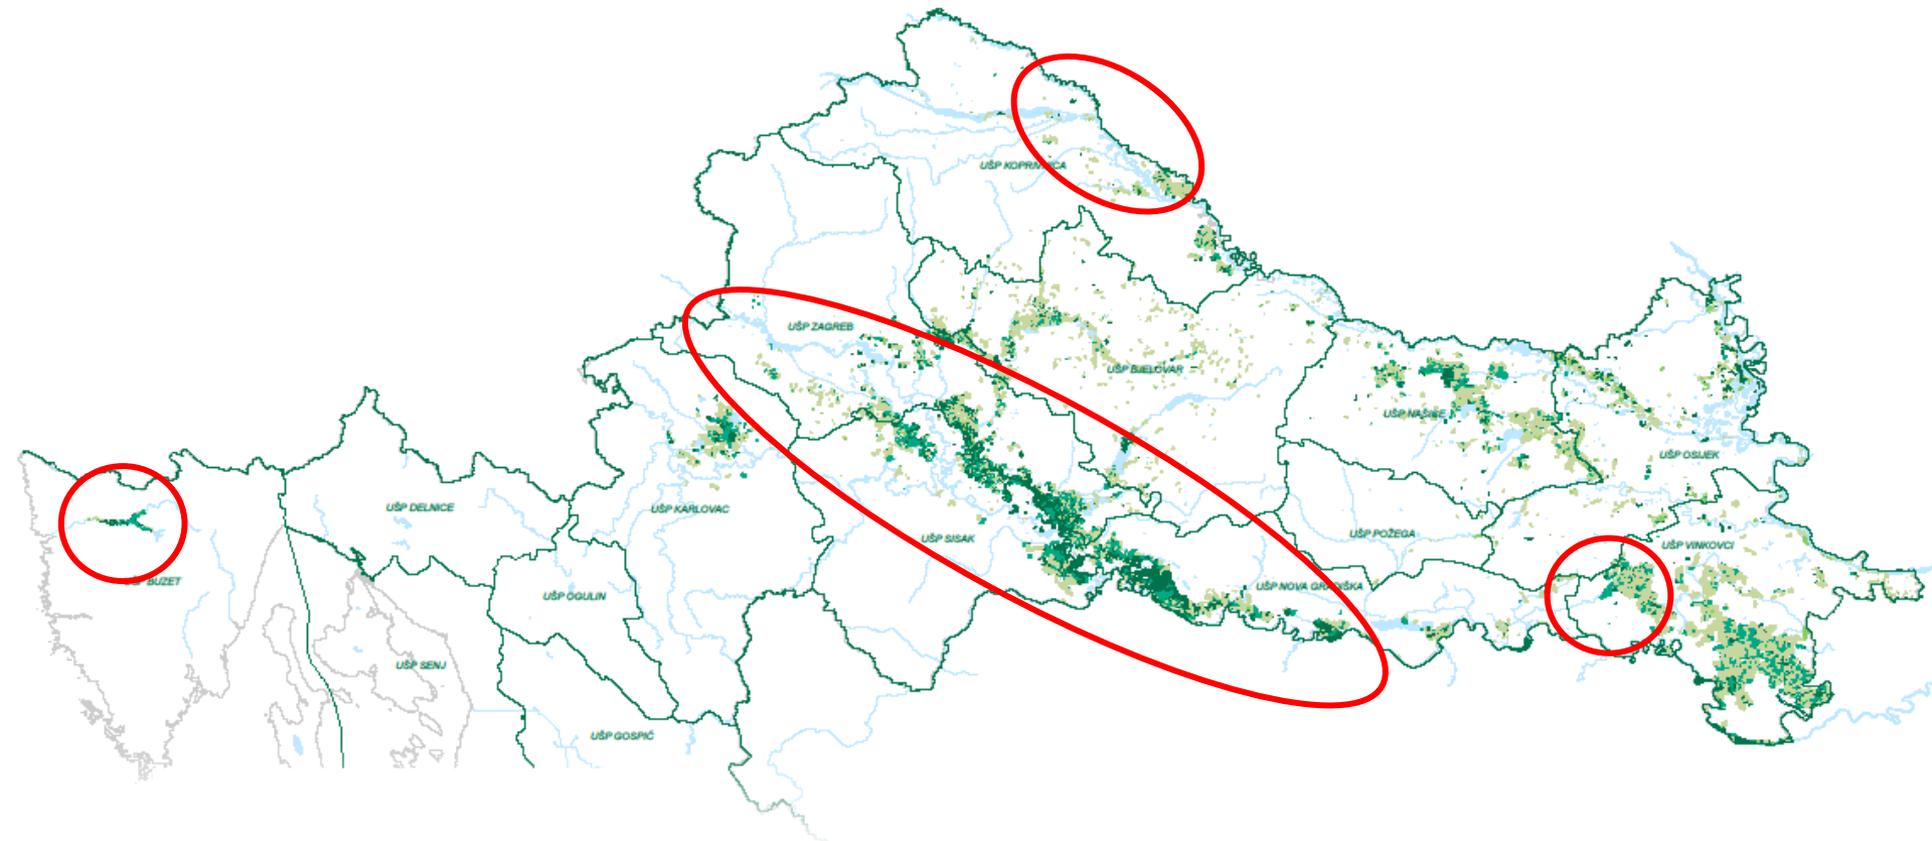

Vzorčenje / *Sampling*

Vzorčenje sestojev ozkolistnega jesena (*Fraxinus angustifolia*) 2011-2024 / Osutost krošnje 30-80 %

Sampling narrow-leaved ash (Fraxinus angustifolia) stands 2011-2024 / Crown defoliation 30-80%

Ozkolistni jesen v nižinski Hrvaški
Narrow-leaved ash in lowland Croatia

70 let star gozd
70-year old forest

30 let star gozd
30-year old forest

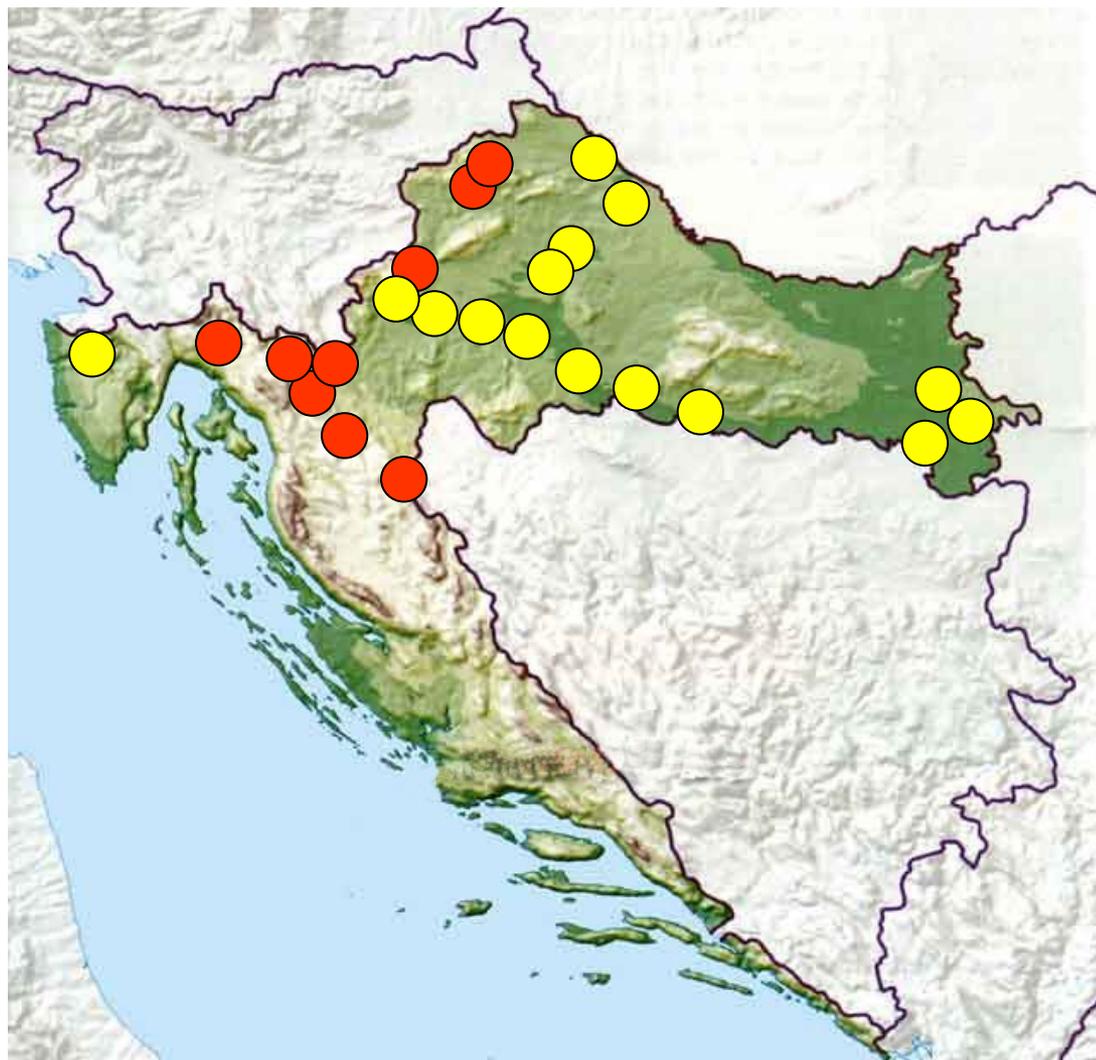

Simptomi odmiranja v Naravnem parku Lonjsko polje

Dieback symptoms in Lonjsko polje Nature Park

Primarni vzrok odmiranja na Hrvaškem *Hymenoscyphus fraxineus*
- potrjene ugotovitve
*Primary cause **Hymenoscyphus fraxineus** in Croatia - findings*

● *Fraxinus excelsior*
1. ugotovitev 2009.
1st record 2009

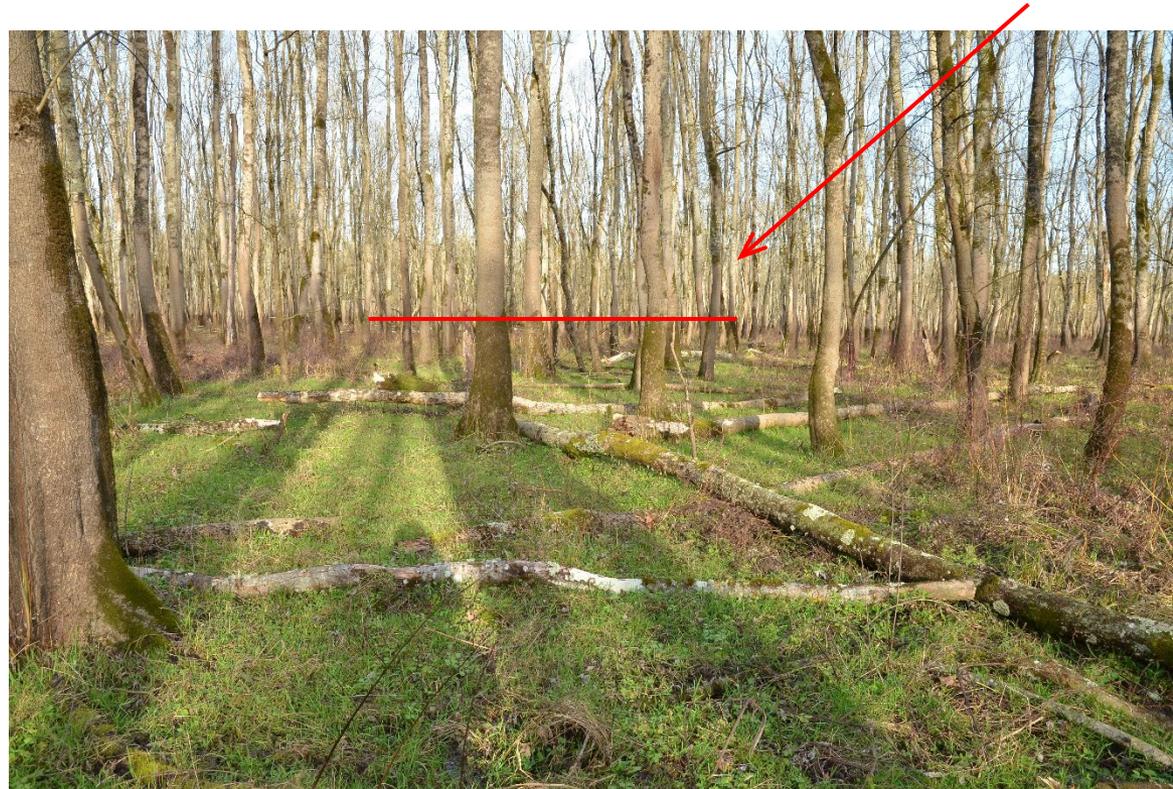

● *Fraxinus angustifolia*
1. ugotovitev 2011.
1st record 2011

Hymenoscyphus fraxineus

Tipični simptomi - korenina / *Typical symptoms - roots*

Lentinus tigrinus

Tipični simptomi v dnu debla
Symptoms in the trunk base

Cladosporium sp.

Kretzschmaria deusta

Trichoderma sp.

Hymenoscyphus fraxineus

Hypoxylon eurasiaticum

Daldinia sp.

Ozkolistni jesen cca 60 let
Narrow-leaved ash approx. 60-year old

Vinkovci, Strizivojna

Tipični simptomi / *Typical symptoms*

Zagreb, Kutina

Najdene glive / *Fungi found*

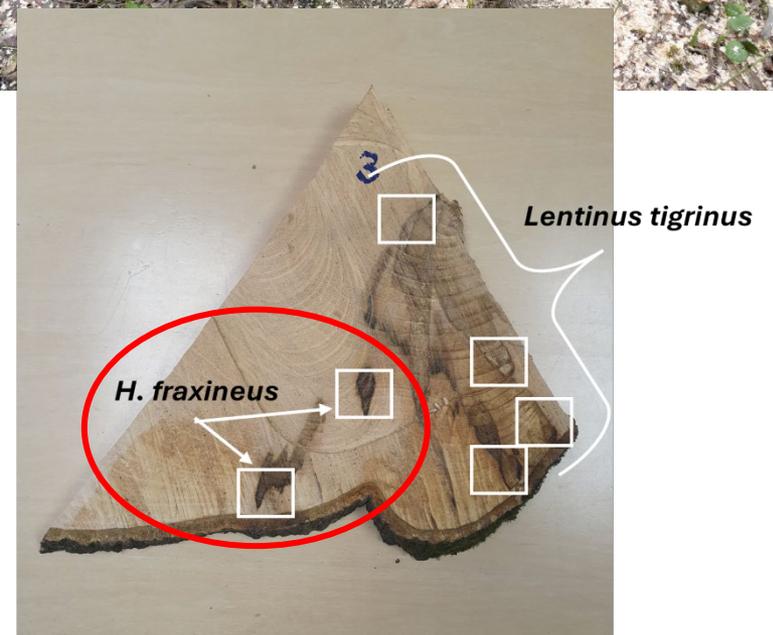

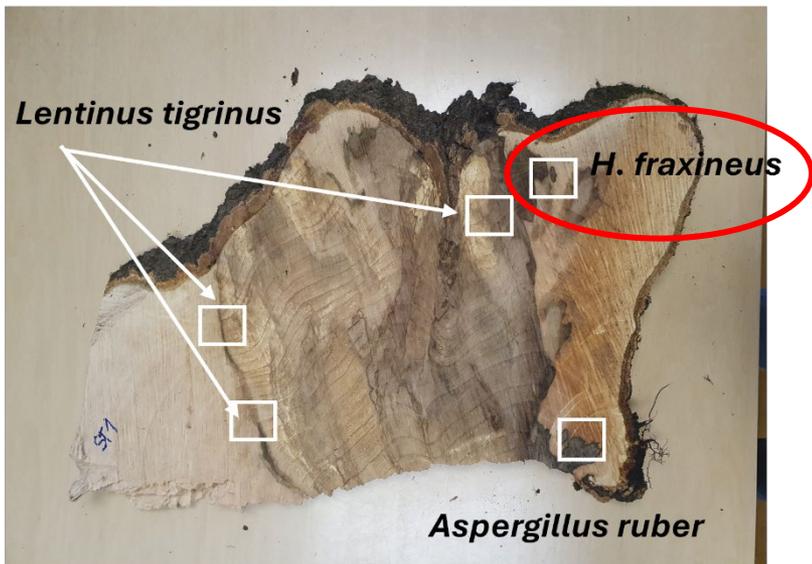

Sisak, Lonja

osutost krošenj / *crown defoliation*

20%

55%

Najdene glive / *Fungi found*

Zagreb, Kutina

Lentinus tigrinus

Ganoderma sp.

Ozkolistni jesen v submediteranu
Narrow-leaved ash in sub-Mediterranean

Buzet, Mirna

Tipični simptomi v dnu debla *Symptoms in the trunk base*

Armillaria sp.

Diplodia fraxini

Diplodia mutila

Fusarium lateritium

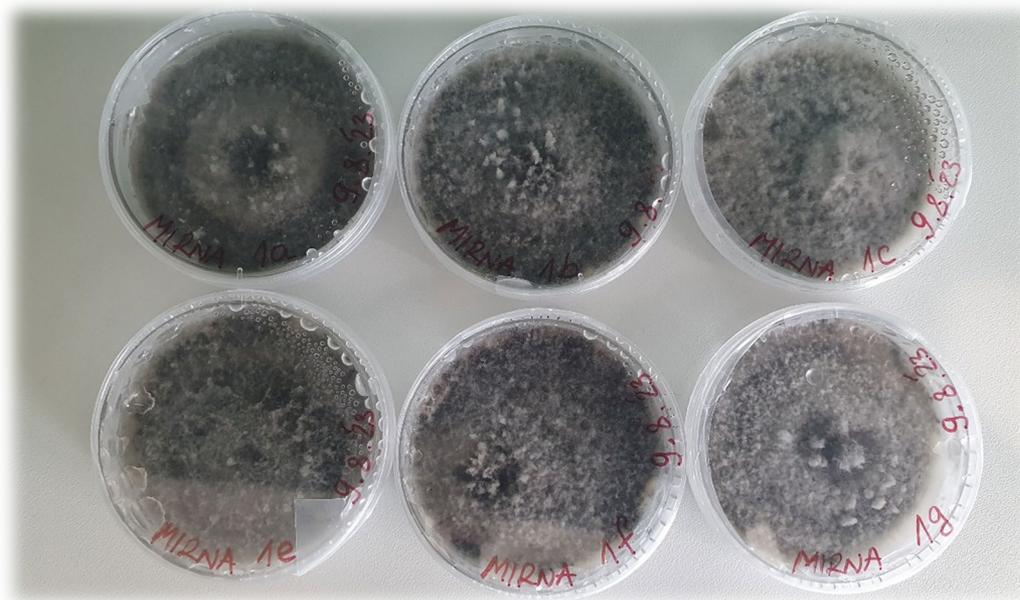

Hymenoscyphus fraxineus

Trichoderma spp.

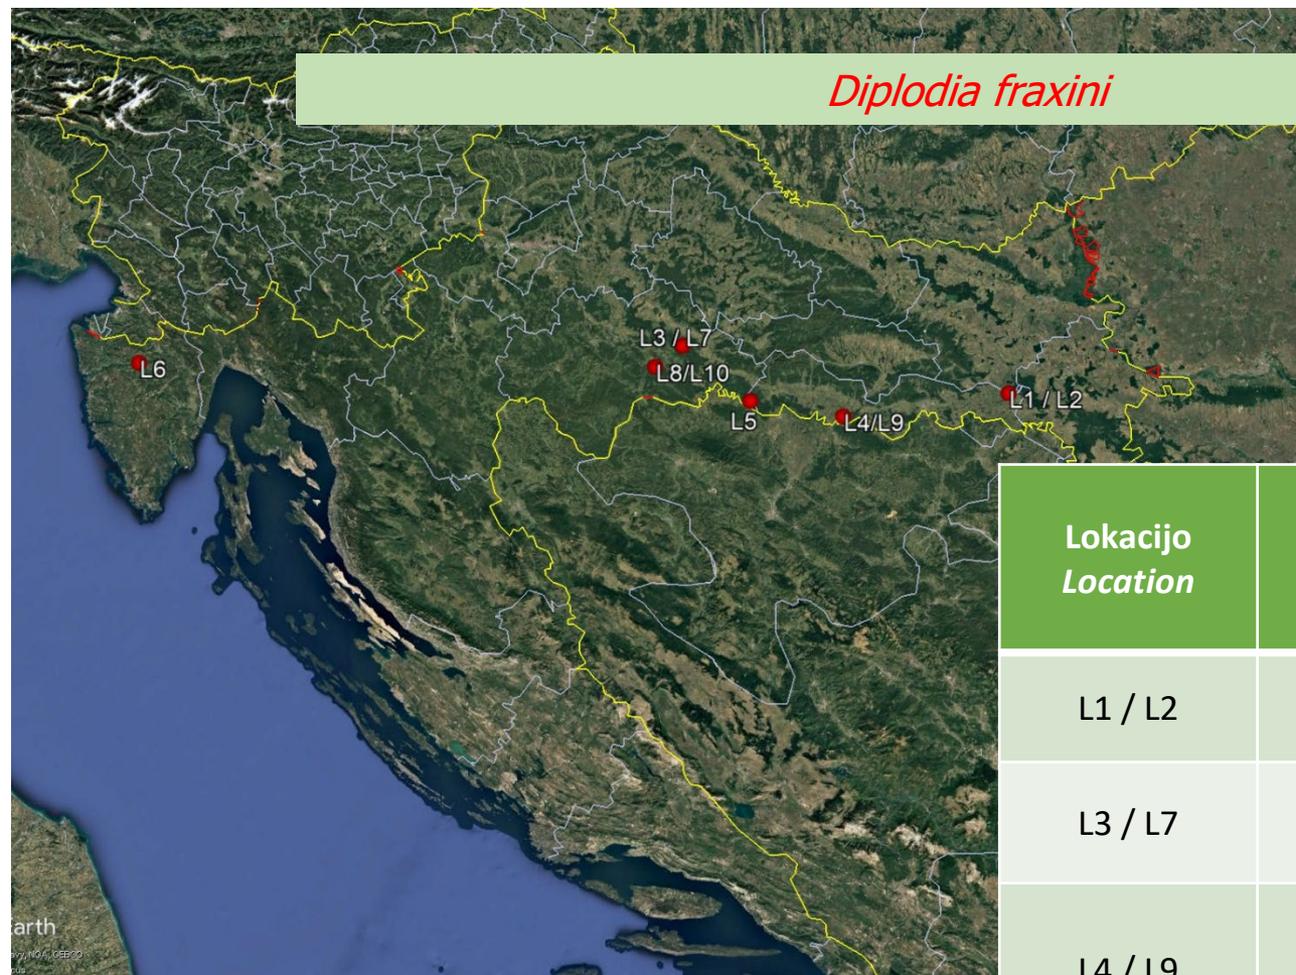

Ozkolistni jesen *cca 40 let*
Narrow-leaved ash approx. 40-year old

Diplodia fraxini

- Analize dreves (različne starosti in osutosti) od leta 2021 do 2025 so pokazale, da v simptomatskih poganjkih in vejah v krošnjah NI *H. fraxineus*, namesto tega v simptomatskih poganjkih prevladujejo *Diplodia* spp. i *Diaporthe* spp.
- *Tree analyses (of various age and defoliation) from 2021 to 2025 revealed that there is NO H. fraxineus in symptomatic shoots and branches in crowns, but Diplodia spp. i Diaporthe spp. instead*
- *Diplodia fraxini* predhodno potrjena v Španiji, Italiji in Sloveniji na *Fraxinus excelsior*
- *Diplodia fraxini* *previously confirmed in Spain, Italy and Slovenia as a pathogen of common ash*

Diplodia fraxini

Lokacija <i>Location</i>	Število dreves <i>No. of trees</i>	Vrsta vzorca <i>Sample type</i>
L1 / L2	5 (od <i>/of</i> 7)	poganjki/veje <i>shoots/branches</i>
L3 / L7	3 (od <i>/of</i> 6)	poganjki/veje <i>shoots/branches</i>
L4 / L9	3 (od <i>/of</i> 4)	poganjki/veje/deblo <i>shoots/branches/stem</i>
L5	0 (od <i>/of</i> 2)	poganjki/veje <i>shoots/branches</i>
L6	1 (od <i>/of</i> 2)	deblo <i>stem</i>
L8/L10	4 (od <i>/of</i> 4)	poganjki/veje <i>shoots/branches</i>

Diplodia fraxini

Simptomi v poganjkih/vejah/deblu
Symptoms on shoots/branches/stem

Diplodia fraxini

Test patogenosti: 6-letni ozkolistni jesen

Pathogenicity test: 6-year-old narrow-leaved ash

Diplodia fraxini

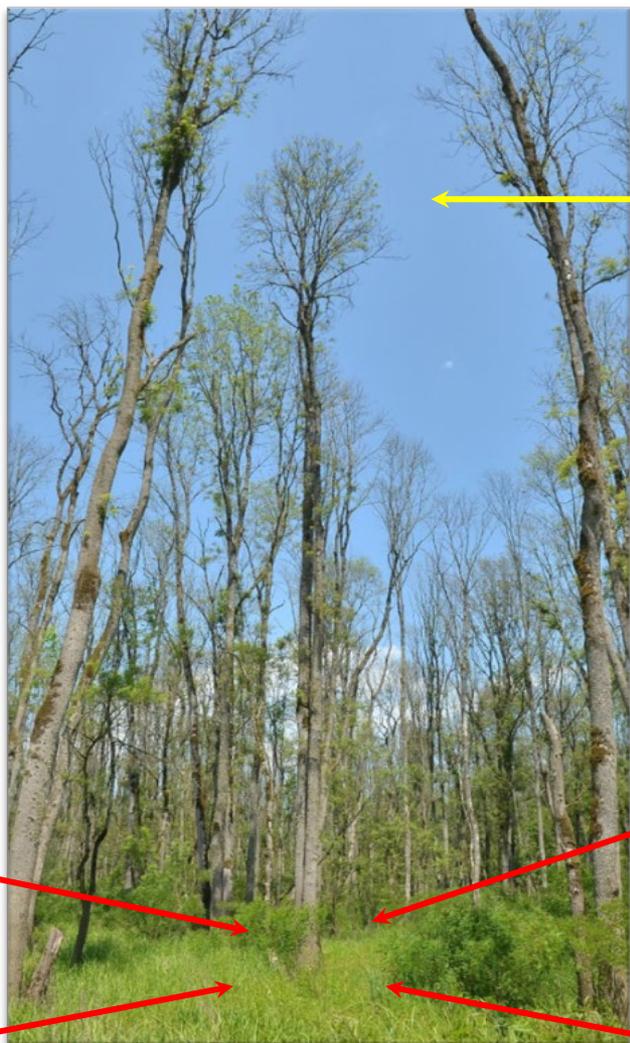

Test patogenosti: 6-letni ozkolistni jesen
= simptomi po 3 tednih

*Pathogenicity test: 6-year-old narrow-leaved ash
= symptoms after 3 weeks*

Najpogostejše najdene glive / *The most frequent fungi found*

Diplodia fraxini, *D. seriata*, *D. mutila*
Hysteroglyphium fraxini
Bionectria ochroleuca
Botryosphaeria stevensii
Fusarium spp.
Diaporthe eres
Phoma spp.

Hymenoscyphus fraxineus

v krošnjah dreves starih do 30 let
in crowns of trees up to 30-year old

Hymenoscyphus fraxineus

Kretzschmaria deusta

Ilyonectria robusta

Diplodia fraxini, *D. seriata*, *D. mutila*

Eutypa lata

Cadophora malorum | *Cadophora dextrinospora*

Fusarium solani

Lentinus tigrinus

Armillaria gallica, *A. cepistipes*

Ganoderma resinaceum, *G. adpersum*, *G. applanatum*

Veliko hvala vsem sodelavcem ki sodeluje pri raziskavi od leta 2011!
Thanks to all colleagues who have been involved in the research since 2011!

Hvala za vašo pozornost! / *Thank you for your attention!*

Research was carried out under the projects:

Conservation of narrow-leaved ash stands (*Fraxinus angustifolia* Vahl) in the Republic of Croatia with emphasis on biotic harmful factors; 2021-2025; Project leader: Danko Diminić; Ministry of Agriculture, Forestry and Fisheries of the Republic of Croatia, Funds for The Multifunctional Role of Forests (MRF) for financing scientific work in the field of forestry.

Research on the diseases and dieback cause of narrow-leaved ash in the area of FA Sisak; 2017-2018; Project leader: Danko Diminić; FA Sisak, Croatian Forests Ltd.

The role of biotic agents on vitality of narrow-leaved ash (*Fraxinus angustifolia* Vahl.) in Croatian floodplain forests (FRAXINPRO); 2014-2018; Project leader: Josip Margaletić; Croatian Science Foundation

Ecology and restoration of Posavina floodplane forests; 2013-2015; Project leader: Boris Hrašovec; Croatian Forests Ltd.
